

Data Checking – Test 1

These tests present you with number of tables of information which must be checked against each other. This type of test is used to measure how quickly and accurately errors can be detected in data. It is used to select candidates for clerical and data input jobs, particularly where accuracy is important. For example, accounting, banking and healthcare.

Data Checking		Operatives	Supervisory	Management
Craft & Technical				
Clerical & Administrative		Y	Y	
Police, Fire, Military etc.				
Management Trainee				
Graduate & Professional				

This data may be either meaningless, for example account numbers, or may be fairly meaningful, for example names and addresses. In both cases it is vital to check each character rather than ‘read’ the data normally. You should also bear in mind that there may be more than one error in any single piece of data.

These tests usually contain between 20 and 40 questions and take 10-20 minutes to complete. It is important, although difficult, to maintain your concentration for the full duration of the test. The speed at which you can answer these questions is the critical measure, as most people could achieve a very high score given unlimited time in which to answer.

Data Checking – Test 1

40 Questions

Instructions: Answer as many questions as you can in 15 minutes. Find the two identical codes on each line and circle the corresponding letters on the right.
